

Eurobotics LLM Cost / Intelligence Map
AA Intelligence Index v4.3 x non-promotional OpenRouter pricing

Eurobotics methodology v1.3: Y = Artificial Analysis Intelligence Index v4.3. X = AA measured total evaluation cost repriced to current non-promotional OpenRouter tariffs via the ratio of 7:2:1 blended prices (70% cache-read / 20% input / 10% output). This is a reproducible estimate, not an exact OpenRouter invoice. No temporary promotional prices are used in the baseline. GPT effort levels (Low/Medium/High/XHigh/Max) move both vertically and horizontally because higher effort consumes more tokens. Claude Fable 5.1 (max) at ~\$13.1k reflects AA measured token volume for its evaluation run; it is the top-right extreme of this snapshot.
