

A — Historical Coding Agent Index v1.1 reconstruction

B — Current Intelligence Index vs TOTAL evaluation cost (17 Sep 2026)
horizontal = index level; dotted vertical = total evaluation cost; point = measured intersection

Correction from prior version: the previous lower panel used blended API price per 1M tokens. That is why Sol appeared near USD 3.08. Here the x-axis is TOTAL cost to run the full Artificial Analysis Intelligence Index. Sol Max is therefore about USD 3,465, Terra Max about USD 2,501, Luna Max about USD 320.

Sources: Artificial Analysis model pages / comparison pages, accessed 17 Sep 2026. Current measured totals: GLM-5.3-Flash USD 280.28; DeepSeek V4 Flash 0731 Max USD 474.19; GLM-5.3 Max USD 2,503.48; GPT-5.6 Luna Max USD 319.93; Terra Max USD 2,500.72; Sol Max USD 3,465. Qwen3 Coder 30B A3B has an estimated Intelligence Index of 10 but no published comparable full-index total cost.
